Cloud Control

Remote monitoring and control software

To support the demand for better control and connectivity, many of Coeval's systems offer cloud-based technology which opens up multiple operating functions when it comes to managing your LED signage.

Our Cloud Control software provides full monitoring and control of your signs, remotely and in real-time. The application is designed to give the user an overview of all end devices, with the ability to work with one device at a time. The signs are displayed on a geographical map in their exact locations. Each individual sign can be accessed by clicking on it on the map or searching by serial number or name. You can see its state, check battery voltage, the functioning of other hardware components or set new messages or pictograms to be displayed.

All alarms and warnings are instantly and clearly displayed on your screen, and SMS notification is also available. In case of battery voltage drop, for example, you will see an instant illustrative message on the screen and the person(s) responsible for the sign/site will receive a clear SMS message with the details of the issue.

The ease-of-use and flexibility of Cloud Control is further enhanced by its ability to gather and communicate important data to support decision making and wider network management.

KEY FEATURES & FUNCTIONALITY

- Displaying each device on the geographical map
- Creating messages and pictograms to be displayed
- Scheduled sign operation, with 5-year calendar
- Collecting data and creating statistical reports about traffic
- Instant alarms and warnings
- Monitoring of hardware components: LEDs, battery and charging, light sensors, real-time clock, temperature and humidity inside the housing
- Database with work history for analysis and problem tracking
- Brightness control
- Sign status indication

BENEFITS

- Enables asset managers and others to manage multiple signs remotely
- Saves time and reduces risk with limited site visits required
- Valuable data can support wider planning and decision making

Our Cloud Control software provides full monitoring and control of your signs, remotely and in real-time.

Cloud Control displays a number of parameters including:

- Temperature

- LED error faults

- Battery and solar performance

- Brightness

- Timer events

- Communication events

- Data collection
